Ashen Kavisha

Ashen Kavisha Lakshan

Profile Summary

Motivated and detail-oriented second-year Information Technology undergraduate at SLIIT with hands-on experience in web development. Skilled in Python, SQL, Java stack, and Kotlin / Java mobile development, with a strong foundation in data preprocessing, visualization, and model training. Experienced in building scalable web and mobile applications including freelance platforms, money tracking apps, and campus-based management systems using modern frameworks and database technologies. A fast learner with strong analytical thinking, teamwork, and problem-solving skills, committed to applying innovative solutions to real world challenges and contributing effectively in dynamic tech environments.

Main Projects

- **Smart Vehicle Parking Management System** | Web Application

  Tech Stack: HTML, CSS, JavaScript, PHP, MsSQL

  - Developed a comprehensive web application for managing vehicle parking based on vehicle type with real-time availability tracking.
  - Utilized data structures and algorithms to optimize parking slot allocation and vehicle availability checking.
  - Designed responsive and intuitive user interface using HTML5, CSS3, JavaScript, and Bootstrap framework Built secure user authentication and donor eligibility validation workflows.
  - Implemented backend functionality using Node.js/Express.js with restful API architecture.
  - Managed and designed MS SQL database schema with normalized tables for efficient data storage and retrieval

Hospital Management System

Tech Stack: java, javaScript,MsSQL , HTML,CSS

- Simplify the interaction between patients and doctors.
- Provide a fast, user-friendly interface for patients to search and book appointments.
- Ensure data security with role-based authentication and data integrity.
- Enable doctors to manage their availability and view appointment schedules.
- Designed a clean UI for seamless navigation and improved user experience.
- Allow online booking and emergency appointment requests.

Lung Cancer Prediction System Machine Learning

Tech Stack: Python, Pandas, NumPy, Scikit Learn, Seaborn

- Developed ML classification system with optimized feature engineering pipeline using SelectKBest and mutual information scoring, achieving dimensionality reduction from full feature set to top 10 predictive features.
- Implemented end-to-end data preprocessing workflow including class balancing, normalization, and correlation analysis (threshold >0.85) to ensure high-quality training data for medical prediction tasks.
- Built reproducible Python pipeline using Scikit-learn, Pandas, and Seaborn for automated feature selection and statistical analysis of patient health data.

Skill Lab – Online Freelance Platform (MERN)
Tech Stack: MongoDB, Express.js, React.js, Node.js

- Built a full-stack freelance marketplace platform supporting job posting, bidding, and project management.
- Developed user registration, service listing, secure messaging, and profile management modules.
- Implemented backend logic and API routes using Express and Node.js with MongoDB as the data layer.
- Designed a responsive UI in React enabling smooth real-time interactions between freelancers and clients.

Education

BSc (Hons) in IT specializing in Data Science Sri Lanka Institute of Information Technology(SLIIT) — **2024 - Present**

G.C.E A/L in Physical Science stream — **2023**

- Physics-C
- Combined Mathematics-C
- Chemistry-C

Certifications

The Full Stack Web Development Bootcamp 2023-MERN STACK
Numpy For Data Science Real Time Experience

Skills

Programming

- Python
- Java
- JavaScript
- C#
- Kotlin

Web

- Node.js
- React
- Express.js
- Next.js
- Tailwind CSS

Database

- MySQL
- MongoDB
- SQL

Tools & Others

- Git
- Spring Boot
- Bootstrap

Languages

- English
- Sinhala
